CATALOGUE 2013

**Comfort and safety through
technology, innovation and local knowhow**

**[MONGREL
BOOTS]**

Aussie born and bred

At Victor Footwear, we've been making boots in Australia for Australian workers since 1930 – we know what is required in Australian conditions. Our manufacturing facility in Sydney now manufactures work boots that represent the latest in technological advances in our industry. Technology is key to comfort and safety, and along with technology comes innovation. This catalogue features seven ranges and more than 35 styles of work boots. An example of Mongrels innovation is our ZipSider range. Launched in 2007, this series now contains 9 styles and is the fastest growing range in Australia. It is now copied, but not matched by our competitors.

SP > SERIES

The revolutionary ZipSider style allows for great ankle support with an easy on and off feature required by many trades 2 – 3

The high tech rubber-soled work boot that's built to take the heat no matter how rugged the conditions – heat resistant soles up to 300°C 4 – 5

The lightweight work boot with an aluminium toe-cap and advance Sport technology soling 6 – 7

Features many of the original and popular styles of our SP Premium Range launched in 2006 8 – 9

Our Trade range provides high spec features matched with a PU Air innersole and value for money rugged leather uppers 10 – 11

Many workers don't require a steel toe-cap. So Mongrel offers a number of non-safety styles from riding boots to classic elastic sided boots and a security range 12 – 13

SP > SERIES

Boots that do what you do

No one boot style is right for the wide range of work situations. That's why Mongrel Boots have created a number of Special Purpose ranges with an even wider range of styles, to create boots that meet the special needs of our wearers.

Whichever range or style you choose, you are assured the latest technology plus individual features to enhance the boots ability to perform in your particular industry.

If you're in the mining industry, or working in really tough environments, there's our rubber soled extra spec SP>R series. If you need good ankle support but like many trades dealing with the general public, you need to take your boots on and off often – there's ZipSiders – our SP>Z Series. SP>S is our lightweight Sport series with an aluminium safety cap and advanced duo colour sports sole technology. If you want a basic safety boot with value for money leather uppers in rugged hide, you'll like our Trade range – SP>T Series. And if you don't need steel toe-caps – there is SP>N, our non-safety protective range.

We've also matched a whole new range of innersoles under the brand name OrthoTec. Now OrthoTec combined with your choice from the Mongrels SP Series range will result in the perfect boot for you, your feet and the job you do.

Key performance features

AirZone Comfort System

AirZone technology is a highly effective element of our sole design and features in all SP Series ranges. The system uses air trapped in the cavity of the heel to significantly reduce the degenerative effects of heel strike. The shock absorber effect of AirZone increases comfort – which is a safety feature for workers as it reduces tiredness.

Roller Sole technology

Mongrels Roller Sole technology is featured in all SP Series styles. This computer aided design feature results in a specially shaped sole that creates a roller action when walking. This roller action increases comfort and safety by making the action of walking far smoother, thus lessening fatigue.

ToughSider sole protection

Mongrels ToughSider sole design principles have been applied to create soles to match each of our SP Series ranges. The balance between lightness in the case of SP>S and longevity in tough conditions that will need to met by our SP>R range have been computed to create soles with a unique ability to promote both comfort and durability.

Quality materials

The new range of Mongrel Boots feature high quality materials required to meet the purpose to which the boots have been designed. These high quality materials include long wearing rubber soles for tough work environments, a variety of leather upper grades matched to the need for performance and sole designs created with traction needs of a wide variety of occupations in mind.

TPU

Thermoplastic polyurethane provides better grip, comfort, flexibility and wear resistance than regular polyurethane. It's not only lighter and tougher, but also has a longer shelf life. Matched with our ToughSider sole designs, it provides a formidable series of benefits for our wearers.

PU/Rubber

Our SP>R range has been designed to take on the toughest conditions – but not at the expense of comfort. A new lightweight and flexible polyurethane midsole has been fused with a long wearing nitrile rubber outsole. The sole features a heavy duty 6mm deep tread pattern and is heat resistant up to 300°C.

Comfort breakthrough – OrthoTec innersoles

Adding to the basic foundation of our trademark AirZone sole design is a new range of three specific innersole designs under the brand name OrthoTec. The OrthoTec range has been matched to the SP Series into which they are included. The styles are called – OrthoTec PU, OrthoTec Gel and OrthoTec Air. Each OrthoTec innersole style is constructed using a foam material which with specific computer aided design allows air to circulate around the foot, keeping the wearers feet cooler and drier. Moisture reduction means less odour and harmful fungus and bacteria.

PU

Our PU innersole features a thick soft structure matched to a design featuring interconnected air holes that assist the closed-cell foam to circulate air throughout the boot while creating extra absorbency. This style features in most of the SP Series ranges.

Gel

The lighter weight of our SP>S range, which has been designed using sports technology including duo colour soles, has been matched with a special PU Gel innersole. This new and improved innersole features a larger gel pad to provide extra shock absorbency and increased comfort all round.

PU Air

Our value for money trade range SP>T features OrthoTec open foam PU in a deceptively simple but long wearing and comfortable design. The air blown PU assists in air circulation and moisture control. The nature of its construction also means that the innersole will maintain its shape and not flatten out significantly, even over time.

Originally designed to meet the needs of tradesman requiring a boot that was easy to slip on and off but provided greater ankle support – increasingly required on many worksites. The range has been redesigned and new styles included as a result of demands in specific industries including construction. ZipSider styles feature the OrthoTec PU innersole.

- Easy on... easy off ZipSider styling
- ToughSider dual density sole for extra shock absorbency
- Proven AirZone comfort system
- OrthoTec PU innersole with inter-connected air holes for cool, comfortable feet
- Roller Sole technology for ease of movement
- Steel toe-cap
- Premium quality leather uppers

Many occupations require all the advantages of SP safety without the need to meet harsh treatment. Indeed, lightweight can be critical in some work situations. Our SP>Sport range provides a long wearing but lighter weight combination of an aluminium toe-cap and duo colour TPU sole. It is further enhanced with our OrthoTec Gel innersole.

- New duo colour TPU/PU sole for extra grip
- New ToughSider dual density sole for extra shock absorbency
- New lightweight, padded aluminium toe-cap for maximum safety and comfort
- Proven AirZone comfort system
- New OrthoTec Gel footbed with a larger gel pad for improved shock absorbency and comfort
- Roller Sole technology for ease of movement

SP > ACCESSORIES

OrthoTec PU footbeds

(sizes 4-14)

Mongrel polyurethane cushion footbeds provide superior shock absorption, arch support, ventilation, anti-bacterial properties and stability for your feet whilst incorporating our AirZone comfort system for maximum comfort.

Suede & nubuck protector

(display pack - 6 bottles)

A highly effective water and oil repellent to keep your suede or nubuck Mongrel's dry and promote longer life from your boots.

Work boot laces

(120cm & 140cm)

(pack of 10 pr)

Replacement work boot laces. Available in black/brown, wheat, and black.

Cotton socks

(pack of 12 pr)

Mongrel cotton socks are truly a Mongrel with a pedigree. Made from 95% cotton, they will comfortably be your Mongrel's new best friend.

Bamboo socks

(pack of 12 pr)

Make a world of difference to your feet with a pair of Mongrel bamboo socks! Featuring anti-bacterial, odour resistant and thermo regulating properties whilst promoting use of sustainable materials.

Penetration resistant footbeds

(sizes 5-12)

Designed to resist punctures caused by accidentally stepping on sharp objects. Anatomically designed for superior arch support, they also offer improved torsional stability which reduces fatigue, whilst absorbing shock and wicking perspiration.

Mongrel Safety Boots

These Mongrel Safety Work Boots are made to Australian Standard AS/NZS 2210.3.2009 Class1* and are a basic safety boot marked category SB. The boots are certified by TUV Rhineland Australia P/L, www.tuv.com. Mongrel Safety Boots are suitable for general industrial and agricultural use. The boots will feature either a TPU/PU sole or a Nitrile Rubber PU sole which have specific usage conditions. The sole type appears on the boots and on the inner tag.

TPU/PU

The maximum temperature in which TPU/PU soles can be used – intermittent contact up to 130°C and continuous contact up to 110°C.
Chemical contact – avoid use with strong acids and alkalis >10% concentrations such as hydrochloric and sulphuric acids and caustic soda. The soles are oil resistant.

Nitrile Rubber/PU

For Nitrile Rubber/PU soles – the maximum temperature for usage range is up to 300°C. The sole is acid, oil and heat resistant. The boots have a removable inner sole. For safety certification all testing is carried out with the inner sole in place and the boot should only be used with the inner sole in place for maximum safety – in particular shock absorption. Should the innersole need to be replaced it is important to purchase one of a similar standard. Replacement innersoles can be purchased from sales outlets carrying the Mongrel Boots range. A list of stockists is available via our website – www.mongrelboots.com.au

Unauthorised alterations

Any unauthorised alterations to footwear such as mechanical stretching or adding vent holes are discouraged as they may • take the footwear out of compliance with this standard • void any approval or certification of the footwear • reduce the effectiveness of the footwear. Where alterations of the footwear are contemplated, advice should be sought from the manufacturers and approving authorities.

Comfort and safety

It is essential that the boots are properly fitted for maximum comfort and safety. Of special importance is to allow room under the cap for your toes to move. Your toes should not come into contact with any part of the toe cap. You should allow around 5mm between your toes and the back of the cap. Your heel should fit neatly into the back of the boot so that when walking, your boots do not move up and down on your heel. The boot should fit comfortably around your foot.

Maximising the life of your Mongrel boots

Store in dry and well ventilated environments – air conditioned environments are ideal. Drying your boots should be at normal room temperature. Avoid forced heat drying and direct sunlight. Regular cleaning is recommended. Remove dirt and grime from the upper with a damp cloth and then apply boot polish or dubbin depending on leather type. With suede or nubuck leather, clean with a suede or nubuck brush. Soles should be cleaned regularly with water and allow to dry. The life of your boots is related to the working conditions to which they are exposed, the care you give them and frequency of use.

* Only applies to Mongrel Safety range.

How to order
